### PRES. TENER WAS JUMPER IN TIME OF BROTHERHOOD

The present difficulties between magnates and players—which don't threaten to be very difficult—recall the stirring days of the brotherhood war of 1890, when the "fraternity" of that day deserted the National League and organized the Players' League. It was just twenty-seven years ago today that the magnates of the old circuit held a meeting in New York to discuss war measures, and they decided to institute a suit in equity to restrain their reserved players from jumping. This measure was not successful, and when the season started but few of the players reported.

John K. Tener, now president of the National League, was one of the leaders, going from the Chicago National to the Pittsburgh Players' club. In fact, only two of the guard remained loyal to Cap Anson, who had to get together a squad of kids, who were called "Colts" or "Cubs." The latter name stuck, and the old title of White Stockings went into the discard, until it was revived by the Chicago Americans.

The New York club was almost put out of business by the war, only three of the veterans remaining faithful. Day and night, the owners were financially ruined, and only the aid of Arthur Soden of the Boston club enabled them to get through the season. Philadelphia had only four loyalists in its 1890 club. Pittsburgh was hardest hit of all. Many of the games scheduled for the season had to be postponed, and some of them were played in the smaller cities around the Smoky City.

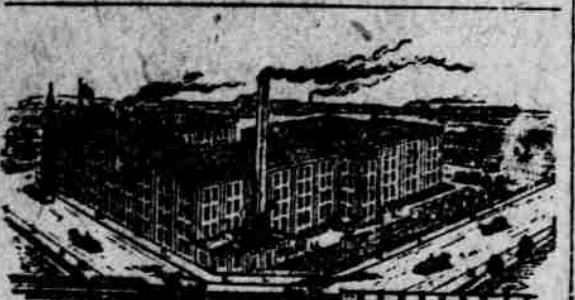

The club led by Guy Hecker lost 114 games, including twenty-three in a row, and three in one day. First and last, fifty players were called were the Pittsburgh uniform in 1890. J. Palmer O'Neill kept the club going in spite of all adversities, although there were many times when he scarcely knew where his players' next meal was coming from.

### Jimmy Barry Fought Many Draws During Time He Held Title

Jimmy Barry, ferocious and hard-fighting little fighter that he was, fought more drawn battles than any other champion in ring history. It was twenty years ago today that the Chicago bantam defended his title against Sammy Kelly in New York, the two little fighting cocks going twenty fast rounds to a draw. Barry won the bantam title in '94 by knocking out Casper Leon, an Italian, in Lemont, Ill. The next year Leon held him to a draw in 14 rounds at Chicago.

In 1897 Barry fought draws with Sammy Kelly, Harry Harris, Young Corbett, Johnny Van Heest, George Siddons and Lee Agnew, but won the world's bantam title by knocking out Walter Croft in London, the English boy dying later. In 1898 Barry fought three draws with Casper Leon, seven of his nine bouts that year ending in draws. The following year Barry retired undefeated, just in time to save himself from a probable licking by Terrible Terry McGovern, the Brooklyn boy who was then forging to the front.

A man arrested for alleged attempt to wreck King Alfonso's train was identified as Rafael Dura Floriot, a deserter from a regiment stationed at Malaga.

### HOME OF THE WEAVER PIANO

—Where every man is a mechanic and many are artists.

### WHERE QUALITY REIGNS SUPREME

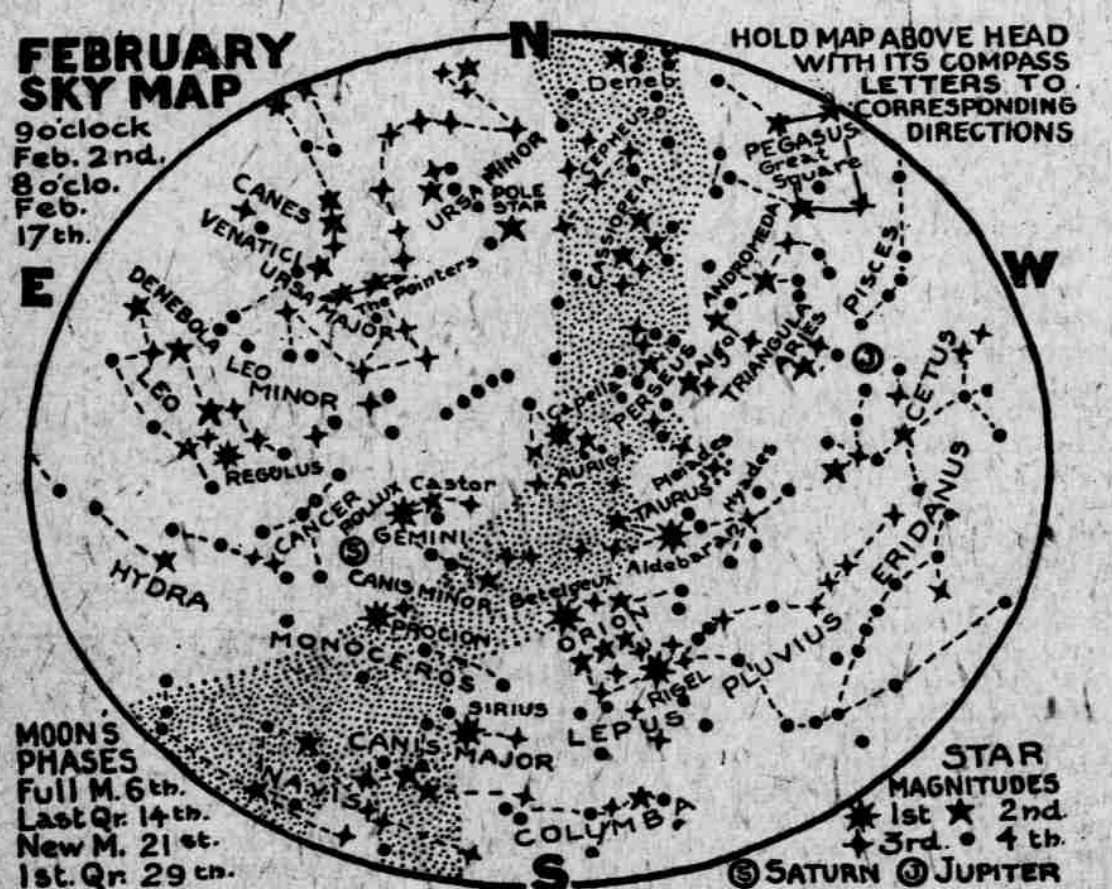

—The purchase of a Weaver Piano means musical satisfaction for a lifetime.

### THE HEAVENS IN FEBRUARY

Jupiter the Evening Star and Near the Horizon, Disappearing Before Midnight—Saturn Climbing Toward the Meridian at the Same Time—Venus and Mercury Both Visible as Morning Stars—Whole of the Constellation of the Lion Now Visible—Milky Way Stretches Through the Zenith Almost North and South—Composed of Millions of Stars—Dark Spots Termed "Coal Sacks"—New Theory to Explain Them.

(By C. S. Brainin of the Columbia University Observatory Staff.)

Jupiter is the evening star this month, and he glows with undiminished brightness, but he is noticeably nearer the horizon at 9 o'clock than he was a month ago. By 11 o'clock he sinks well down into the mists along the horizon and out of sight for most of us. Saturn is climbing toward the meridian just about this same time, and the view spread out before us is not to be surpassed. Castor, Pollux and Saturn are nearly in a straight line, in the order named, from the north. Saturn, Procyon and Sirius make another straight line and just to the west is the grandest of the constellations, Orion. To see this array rise in the east or to see it spread across the southern sky, as we can this month, is to see the best starry heavens can command.

The morning sky is also of interest this month, for both Venus and Mercury are visible as morning stars. The latter has his greatest westerly elongation, or angular distance from the sun, on the 11th, and on that date as well as on several nights preceding and following, can be observed just before sunrise. These two planets will be found quite close to each other.

#### New Constellations.

Last month we were able to put on our map only a part of the constellation of the Lion, Leo, but this month's map contains the whole of it. In addition to possessing the first magnitude star Regulus, the star Denebola and the stars which form the Sickle, Leo has a peculiar prominence in the older systems of astronomy, because the Sun was in this constellation at the time of the summer solstice, or mid-summer, several thousand years ago, at about the time of the first scientific and systematic study of the sky. At the present time the solstitial point is in the constellation of the Twins, near the midpoint of a straight line drawn from Pollux to Aldebaran in Taurus. Denebola, next to Regulus, the brightest star in Leo, is in the eastern end of the group and marks the lion's tail. From the way the older astronomers speak of this star, it appears that Denebola must have been markedly brighter than at present. Just to the north of Regulus is a bright star, which is Gamma Leonis, a famous double, which can be easily resolved by a small telescope into two components of different colors.

#### The Milky Way.

The Milky Way now stretches through the zenith in a direction almost north and south, and along its path are found many of the most important constellations and stars. Those who have a good view of the sky can trace its path and recognize Cepheus and Cassiopeia to the northward; next, Perseus with the remarkable variable star Algol; almost in the zenith is the constellation of Auriga, the Charioteer, with the white star Capella to mark it; then, Gemini, the Heavenly Twins, and Taurus, Orion, the two Dog groups, and away into the southern horizon is Argo Navis, the Ship. But it is not alone for the important constellations found along its path that the Milky Way, or Galaxy, is important, for the Milky Way itself has been the subject of much study and scientific investigation. In general, we may say that the Milky Way is composed of millions of stars, of the fainter magnitudes apparently, but not necessarily of little intrinsic or absolute magnitude, for their distance is very great. The number of them has never been estimated. In

some parts where there are veritable star clouds, composed of separate stars, yet so densely packed as to give the appearance of a nebula almost. There are a few spots right in the region of the Galaxy which are almost entirely devoid of stars, while around them the stars are as thick as anywhere. These have been popularly termed "coal sacks," and lately a new theory has been advanced to explain the curious lack of stars in those spots. Certain photographs of these places showed a remarkable likeness to the photographs of some nebulae, and the thought was advanced that between us and the Milky Way were situated "dark" nebulae, which cast no light of their own and cut off the light which the stars of the Milky Way would have sent us. This is still but a conjecture and needs to be demonstrated further, but it is welcome as an attempt to explain rationally what was inexplicable before.

Still another theoretical conception is connected with the Milky Way, and this bears upon the construction of the universe. The Milky Way stretches in a great circle completely around the heavens, though naturally, from one place we see only part of the entire ring. Suppose, now, all the stars which form our universe were gathered into a flattened space shaped like a book, a milestone or any other three dimensional solid which has one dimension, or side, very much smaller than the other two. Let us assume further that the stars are pretty evenly scattered throughout the flattened piece of space and that we ourselves are on Mother Earth not far from the center of all this great profusion of stars. If we look in any direction into the sky we shall see all the stars that are in that direction from us; the more stars there are the denser they will appear to be placed. When we look in the direction of the larger measurements or dimensions of our book-like space we shall look at many stars, and they will appear to be very thickly placed; when, however, we look in the direction of the smallest dimension we are looking into a space which is populated with stars only for a short distance, and they will appear much fewer. That may be exactly the case with the Milky Way; its great circle possibly determines a plane in space near which most of the stars live.

#### THE WEATHER

New Haven, Jan. 30.—For New Haven and vicinity: Generally fair and colder tonight and Wednesday.

Connecticut: Fair tonight, followed by unsettled weather Wednesday; colder; fresh north-west winds.

The disturbance which was central over the lake region yesterday morning is now passing out the St. Lawrence valley. It has caused unsettled weather with rain or snow during the last 24 hours in the eastern portion of the lake region and along the Atlantic coast from North Carolina to Maine. It is followed by an area of high pressure which is producing pleasant weather with lower temperatures. A well defined area of low pressure is central this morning over Colorado.

Conditions favor for this vicinity fair weather with lower temperature.

### DAYLIGHT SAVING PLAN DISCUSSED AT BIG MEETING

New York, Jan. 30.—The National Daylight Saving convention opened a two day session here today to consider the proposition to turn the clocks of the United States one hour forward after midnight on the last Sunday of April and turn them back after midnight on the last Sunday of September.

Delegates from all over the country were present, including 10 from the American Railway association, which fixes the time zones for train schedules. Among the organizations supporting the movement are the New York Daylight saving committee, under whose auspices the convention is held; the chambers of commerce of Chicago, Boston, Cleveland, Rochester and Pittsburgh; the Merchants' association of New York and the More Daylight club of Detroit.

"The results anticipated and already obtained abroad," Marcus M. Marks, president of the borough of Manhattan and chairman of the New York daylight saving committee, told the convention, "are economy through reduction of lighting bills, saving eyesight through the use of less artificial light and more daylight, and health building through working one hour more in the cooler morning and one hour less in the hot summer afternoon. An extra daylight hour is thus added for recreation."

Mr. Marks suggested the organization of a national daylight saving committee, its purpose to be the general education of the public in daylight saving and the enactment of legislation to make it nationwide. Chambers of commerce and boards of trade in virtually every large city

### ELEVEN DOG TEAMS STARTED FROM WINNIPEG TO ST. PAUL IN 522 MILE RACE

Winnipeg, Man., Jan. 30.—Eleven dog teams and as many drivers, the hardest and sturdiest in the north country, started skimming over unbroken trails south of Winnipeg recently on the first lap of the 522 mile classic, the Red River Derby, from this city to St. Paul.

The weather was clear and cold, but the drivers found the going difficult. Later they were well backed nearly twenty miles south of this city. A special train followed the contest-

ants and replenished their food supplies when necessary. Gabriel Campbell, a young Indian of Le Pas, Man., drew what the drivers termed "up-lucky No. 1," compelling him to break the trail at the outset. Other drivers, in addition to Campbell, left in the order named: Fred Hartman, Le Pas, Man.; Gunnar Gutterson, Arnes, Man.; James Metcalf, Le Pas, Man.; Mitchell Kelly, Hecla, Man.; William Grayson, Le Pas, Man.; Albert Campbell, Le Pas, Man.; Thordar Thordarson, Gimli, Man.; Gunnar Thomsen, Hecla, Man.; Orris West, Kashabowia, Ont., and

Ten of the eleven drivers entered in the 522 mile dog race from Winnipeg to St. Paul reached Morris several hours after the start and camped for the night forty-two miles south of the starting point. Horace West, Kashabowia, Ont., No. 10 in the list of starters, withdrew because of inability to control his lead dog. Albert Campbell, winner of the Hudson Bay sweepstakes last year, was pressing his brother, Gabriel, closely when the drivers reached Morris. Photo shows type of dog teams used in long race.

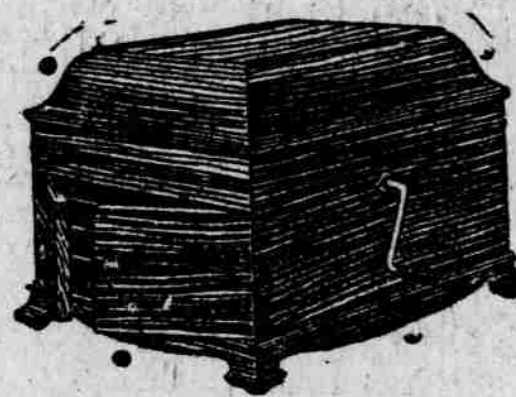

## Latest Styles Victrolas or Grafonolas Plus Special Wissner Service

AT NO HIGHER COST THAN ORDINARY

Special Wissner Talking Machine Service Costs No More and Will Double Your Satisfaction and Enjoyment of the Grafonola or Victrola

A talking machine deserves a place in every home, because it not only entertains but educates. IT PROVIDES ALL THE MUSIC YOU ARE MISSING! Just the music you like, played or sung as well as it can be by the world's best musicians.

AND WE HAVE MADE IT ALL SO AVAILABLE—REGARDLESS OF THE SIZE OF YOUR INCOME—YOU CAN ENJOY PHONOGRAPH MUSIC ON EITHER OF THE TWO STANDARD MACHINES WITHOUT FINANCIAL INCONVENIENCE.

\$50.00 VICTROLA

\$50.00 GRAFONOLA

We will deliver either  
**Grafonola or Victrola**

THE \$50.00 MODEL

and five 75c Records, either Columbia or Victor, of your own choice (ten selections) for

**\$5.00 DOWN PAYMENT**

BALANCE \$1.25 WEEKLY

The total cost of outfit is \$53.75. Other models are sold on proportionately low terms. Remember, we have both the Victrola and the Grafonola

**February Victor Records**

ARE NOW ON SALE

The February List is complete in detail—a wonderful variety, embracing some 70 selections, including a baker's dozen RED SEAL RECORDS, six catchy dance pieces, and a host of vocal and instrumental recordings.

HEAR THEM ALL AT WISSNER'S—

Without Obligation

LET US DEMONSTRATE IN OUR SOUND-PROOF BOOTHS
